Hi Mediatonic Team!

I saw your job posting for a Core Tech Lead Engineer and thought that my experience with Unity Engine, Cloud-Native distributed systems, and gamification to be highly applicable. I'm passionate about blending technologies from outside the engine into the development process and reimagining how we collaborate as remote teams in virtual spaces.

I've enjoyed the wholesome fun of Fall Guys with my partner and friends many times since the beginning of the pandemic, and would love the chance to help your team bring the next iteration to life. Attached is a printer friendly version of my resume, more information can be found on my personal website

<https://www.cloudydev.net>.

Cheers!
